

Ashley Knapp, MA, PhD, is an Assistant Professor within the Department of Psychiatry and Behavioral Interventions within Feinberg School of Medicine at Northwestern University. Her research is focused on youth digital mental health broadly, with a particular interest in designing and implementing accessible, community-based digital tools with marginalized youth and those youth most experiencing inequities. Dr. Knapp is currently supported by a NIMH-funded K01 award where she is partnering with a public library and their teen patrons to co-create a digital mental health service for anxiety to be implemented into the library's teen services. She also uses the integration of human-centered design and implementation research methods in her contribution to other projects, to inform the design of technologies and services implemented across a variety of settings (e.g., healthcare; schools; mental health clinics; community organizations). She received her Ph.D. in experimental psychology from the University of Arkansas (2016), where she was awarded a NIMH-funded F31 to develop and evaluate a brief anxiety "preintervention" for at-risk youth. She went on to complete postdoctoral fellowships at the Center for Technology and Behavioral Health at Dartmouth College (2018) and at the Center for Behavioral Intervention Technologies at Northwestern University (2019).
